

## CHALLENGE

Whether you are a state or local government, university, or corporation, you share a common need for effective asset management and tracking.

## SOLUTION

Our Virtual Asset Tracker is a complete solution of tags, readers and software that automatically tracks and secures assets – with very little human intervention. For the price of a few missing laptops and projectors, it solves the “Where is that...?” problem.

Virtual Asset Tracker includes standard reporting features: Exception Report, Matching Report, Lost Inventory and Total Inventory. It allows you to better manage your existing inventory, lower expenditures with fewer redundant purchases and take less time to conduct a full inventory of assets.

## BENEFITS OVERVIEW

- Track vehicles, computers, books, furniture, and supplies with a combination of active and passive RFID and GPS all within one platform
- Reduce inefficiencies in asset tracking and reporting
- Decrease the time it takes to conduct complete inventories
- Eliminate paper inventory records and time consuming searches

## TECHNOLOGY HIGHLIGHTS

- Windows Mobile based asset tracking application for handheld devices
- Integrates with SAP, Oracle, SunGard and other systems
- Scalable architecture with core server application and handheld clients
- Virtually unlimited number of assets may be tracked
- Uses bar code, active and passive RFID, and GPS for asset and location tracking
- Enables association of user data, photographs and other information
- Supports wireless and USB synchronization
